

## Software BITZER BioEnergy

The software program BITZER BioEnergie realises an user-friendly and comfortable operation of truck and axle scales via a PC. By means of stationary or alternatively mobile remote controls the weighing process is activated. On the one hand, this software generates complete weighing and delivery notes. On the other hand, the program simplifies suppliers' billings. Furthermore, a data export towards Excel is possible.

### Benefits:

- ▲ Automatic activation of the weighing process via remote control and personal identification by means of input of field and customer number at the same time
- ▲ Optional indication of succeeded weighing process (e.g. by means of traffic light – green/red)
- ▲ Facilitation of suppliers' billings with the aid of complete delivery note print-outs as well as customer-related reports
- ▲ Statistics and print-outs of all effected procedures according to customer's requirements (e.g. customer, contract, field, species, output, qualities, disposals et al.)
