

Software BITZER BioEnergy

The software program BITZER BioEnergy realises an user-friendly and comfortable operation of truck and axle scales via a PC. By means of stationary or alternatively mobile remote controls the weighing process is activated. On the one hand, this software generates complete weighing and delivery notes. On the other hand, the program simplifies suppliers' billings. Furthermore, a data export towards Excel is possible.

Benefits:

- ▲ Automatic activation of weighing process via remote control or smartphone and personal identification by input of field and customer number at the same time.
- ▲ Optional indication of succeeded weighing process (e.g. by traffic light – green/red).
- ▲ Simplification of suppliers' billings with print-outs of complete delivery notes as well as customer-related reports.
- ▲ Statistics and print-outs of all effected procedures according to customers requirements (e.g. customer, acreage, product, output, qualities, disposals et al.).
- ▲ Geographical field management with google maps.
- ▲ Data export towards Excel.
